

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

the subject, may share in the investigations and thereby render as complete as possible the detailed account on this salamander to be published later.

GEO. P. ENGELHARDT,  
*Brooklyn, N. Y.*

## WINTER ACTIVITY OF AMBLYSTOMA PUNCTATUM, BAIRD

At noon, Dec. 23, 1911, Manchester, Maine, I found a medium-sized adult crawling on the snow. A warm rain had fallen the night before, but it had cleared off warm and the mercury stood at 42 degrees F. at the time. There was about three inches of snow left on the ground.

The place was on the south slope of a hill in open pasture, about one-eighth of a mile from a little swampy stream. The animal had evidently come from this stream but I doubt if it was going to any definite place, for it was crawling towards a ridge of high land where there was no open water within a quarter mile.

Probably the warm weather had aroused it from hibernation, but why it should have started off across country on the snow is not so clear.

PHILIP H. POPE,  
*Manchester, Maine.*

## GREEN FROG ACTIVE IN DECEMBER

On December 18th, 1915, I saw a full grown green frog (*Rana clamitans*) hopping along the edge of Swan Creek pond, one mile east of Patchogue, N. Y. It was somewhat sluggish in its movements, and I readily caught it. There were no excavations by which it could have been thrown up from the mud. The day was warm and rainy, but there had been a cold spell a few days previously.

WM. SANWALD,  
*Patchogue, N. Y.*
